## TECHNICAL INFORMATION

### WAX FLOOR MAINTENANCE

#### EQUIPMENT

Dust control mop or similar  
Mop and bucket for solution application  
Recommended Wax floor cleaner  
16" Polishing machine fitted with instaloc or Velcro drive disk or similar machine  
16" (40cm) Red pads  
Polish tray  
Polish applicator

**Note** - The area to be cleaned should be broken into a workable area or a pattern during the mopping procedure.

#### METHOD

1. Sweep the floor using a dust control mop or use broom if the floor is contaminated with liquid spills or food.
2. If the floor to be cleaned has only had light usage, using a recommended Wax Floor Cleaner at the recommended dilution rate, mop the entire floor area using a damp mopping procedure.
3. When the floor is dry, using a red pad, buff the cleaned area to a high gloss non slip finish with the polishing machine, turning and replacing pads as required. Clean pads after use.
4. If the floor surface finish shows signs of wear, apply a coat of Recommended Solvent Based Wax Polish to wear areas. Allow time to dry. Buff wear areas with a red pad, then apply a coat to the entire floor surface.
5. Rebuff the floor as in para 3.

#### FAULT FINDING

Slippery floor	Cause.	Remedy.
	Dust on floor	Clean and Buff as per Floor Maintenance Guide
	Too little wax	Clean, Buff and re-coat as per Wax Floor Maintenance Guide
